Step 2: Install Springs in the Lift Mechanisms

	1 0
King	9
Queen	8
Full/Double	6
Twin/Single	4

Number of Springs

Bed Size

• The number of springs in the Lift Mechanism required varies with the different weights of mattresses. If you purchased your mattress with your bed from Wilding Wallbeds refer to the chart to the right. This will also be a good reference point for mattresses not purchased with your Wall bed.

NOTE: After you have completed installing and checking operation of your Wallbed, you may find it necessary to add or remove springs to achieve the correct lift effort of between 5 and 10 pounds.

• Install the first spring in hole #<u>1 for King</u>, #<u>2 for Queen and Full size beds</u> and <u>hole #3 for twin</u> size on both the Mounting Plate and the Tension Arm. Hook one end of the spring under the upturned edge of the Mounting Plate. Lay the spring down and slide it under the matching hole in the Tension Arm. See illustration 1.

5/16" Plain Hex Nut

5/16" x 1 1/4" Flathead Slot Machine Screw

IMPORTANT! Over tightening the nuts will pull the head of the screw too deeply into the Side Board. Tighten only until the head of the screw is flush with the Side Board.

Repeat step 3 with the Left Side Board and Lifting Mechanism.

x 2

Hexagon Cam Washer

x 2

7/8" Washer

<u>Step 4:</u> Locate the Bridge Board and Insert seven Cam Fittings into the sockets provided. Press the Cam Fittings in so they are tight against the bed part. You may need a rubber mallet to get them properly set.

Helpful hint: The Bridge Board and the Head Board are the same length and could be easily confused. Note the Bridge Board has 7 cam fitting sockets where as the Head Board has either Six or nine.

<u>Step 5:</u> Locate the TWO (2) Stretcher Boards and insert four Cam Fittings into the back of each Stretcher. Press the Cam Fittings in so they are tight against the part. See Illustration 4.

Illustration 4

Page 2

Head Boards have 2 options. <u>Option 1 is Standard depth</u> and <u>Option 2 is Extra depth</u>. Determine which Wallbed kit you have and then proceed with the correct option below.

OPTION 1

OPTION 2

WARNING! THE NEXT STEP MAY REQUIRE PROFESSIONAL HELP.

IF YOUR WALLS ARE NOT TRADITIONAL WOOD FRAMING, YOU MAY NEED TO HIRE A HANDY MAN OR CONTRACTOR TO HELP IN ANCHORING THE BED TO YOUR WALL. FAILURE TO PROP-ERLY ANCHOR CABINET COULD CAUSE SEVERE PERSONAL INJURY. CALL TECHNICAL SUP-PORT AT 866-725-6401 IF YOU HAVE ANY QUESTIONS.

x 80 approx.

3/4" Panhead screw (hardware bag #8)

<u>Step 15:</u> Using the Spacer Plates as a reference at the head of the Bed Frame, align the Side Rails and the Face Panels. For proper alignment the Head Rail should be FLUSH with the head of the Face Panel and the Side Rails should have a 1" offset top to bottom on both sides. See illustration 9.

Step 17-B: Attach the Velcro Straps (for holding the mattress in place) by removing one screw from each side rail about 18" from the foot of the face panel. Put the Velcro hooks part of the strap on one side of the bed and the loops part of the strap on the other side. Use the 3/4" washer to hold the strap in place then replace the screw. Insure that the hooks and loops will face each other and interlock. See Illustration 11 Hardware needed for next step from hardware bag #14

Allen Key Bolt

<u>Step 19:</u> Assemble Legs by first removing the nut and the first TWO washers that come pre-installed on the Leg. Leave the washer with a black edge and the thin plastic washer in place on the leg. Insert the Leg Bolt with the first two washers through the Side Rail. DISCARD the thick silver washer then place the black washer and the nut back on the Leg Bolt and tighten.

<u>Step 20</u>: Position the Cross Bar between the Legs. Place 1/2" Star washer on one of the $5/16 \times 3/4$ " Hex Head bolts apply 2 drops of Loc-tite and thread the bolt through the Leg and into the Cross Bar and tighten. Repeat on other side.

IF YOU PURCHASED LIGHTS FOR YOUR WALLBED YOU MUST RETURN TO THE LIGHT KIT INSTRUCTIONS <u>STEP 6</u> AND INSTALL THE SAFETY CUT OFF DEVICE BEFORE MOVING ON.

WARNING: There is tremendous force involved in the next step, do not place hands between the front of the side boards and the tension arms as you set the mechanism.

IMPORTANT! As instructed in step 18, Bolt #3 should be loose enough to slip into the notch at the end of the Tension Arm See illustration below. Λ

Step 22: Stand the Bed face unit up on its Head Rail end. Now with you and vour assistant on either side of the Bed face unit lift until the #3 bolt on the Bed face unit is a few inches above the slotted end of the Tension Arm on both sides. Gently lower the Bed face unit between the Tension Arms and seat the # 3 bolt into the slot at the end of the Tension Arms. Now start pulling the bed face unit down and away from the Bed Cabinet the Allen Key bolt head will seat into the notch at the lower end of the Tension Arms. Lower the bed unit down and pull the Legs down so that they are on the floor. Someone will need to hold the bed unit down as it will want to rise.

Hardware needed for next step from hardware bag #14

Hardware needed for next step from hardware bag #7

<u>Step 24:</u> Slip the Mechanism Cover over the Mechanism so that the tabs on the cover fit into the notches provided. Line up the holes with the threaded supports and insert two 4mm Flathead screws.

Repeat step 24 on the other Mechanism.

<u>Step 25:</u> When the bed is closed check to see if the gap on either side is the same. If it looks right skip this step. If the gap is not right, meaning that the Bed Box is too close to the side board or even touching it at the top on one side it will need to be adjusted. The procedure will require the bottom of the bed to be moved slightly to the left or right depending on which top corner is too close. If the bed is too close on the top right side for instance, the right side (bottom) will need to be slid to the left slightly (See illustration 12). Have one person push the bed at the bottom with his feet while the second person pulls at the opposite bottom side.

<u>Step 26:</u> Place the crown mold on the bed as illustrated and use the $1 \frac{1}{4}$ screws to secure it in place. If you purchased side cabinets apply crown mold to them as well.

Note: Dakota style bed does not have crown molding

<u>Step 28:</u> Anchor the Side Cabinet to the Bed by first pre-drilling three 3/16" holes at the inside edge of the side cabinet. Position the holes close to the front edge of the Side Cabinet one hole should be near the top, one should be inside the drawer area (remove drawer from cabinet to get to this one), and the third should be at the bottom (open door if your cabinet has door, or remove drawer at bottom) for this hole. Now move the side cabinets next to the bed and use three 1 1/4" Gold Screws (located in a drawer or on a shelf of the side cabinet) through pre-drilled holes to anchor Side Cabinets to the Bed.
